Almost one in four employed clients (23%) work in a healthcare support position. These healthcare support occupations have a lower median annual wage ($28,470) than the median annual wage for all other occupations.

21% of new parents listed Spanish as the language they feel most comfortable speaking.

8% of new parents are employed.
The average Social Security Insurance/Social Security Disability (SSI/SSDI) payment made to HFH clients was $770 per month. For perspective, this amount barely covers half of the median price for a rental unit in NYC, which was $1,508 monthly in 2019. In fact, more than three quarters of clients who receive disability benefits are also enrolled in other forms of Public Assistance programs, such as cash assistance or the Supplemental Nutrition Assistance Program (SNAP), for the balance of their income. This analysis demonstrates that receiving SSI/SSDI on its own is most likely not enough to support families.

For almost half of these new parents, this is their first child. The median age for these parents is 25 years old.

Many clients travel far to get to work. Google Maps travel time estimates illustrate that only 11% of clients can get to work in under 30 minutes via public transportation. 54% of clients travel over an hour to get to work via public transportation.

**NOTE:** Analysis for data was conducted at various points in 2021 as follows: resident employment in January 2021, resident enrollment in disability programs in Spring 2021, and new parents in Summer 2021.
